	Insertion Order	Synchronised	Duplicate Entries	Allowing of Null
ArrayList	Maintains insertion order	No	Yes	Yes
LinkedList	Maintains insertion order	No	Yes	Yes
HashSet	No Order	No	No	1
Linked HashSet	Maintains insertion order	No	No	1
Tree Set	Sorts in ascending order	No	No	No
Hash Map	Unsorted	No	No	Null keys and Null Values
Linked Hash Map	Maintains insertion order	No	No	Null keys and Null Values
Tree Map	Sorts in ascending order	No	No	No Null Key or value
Hash Table	Maintains insertion order	Yes	No	1 Null Key and multiple null values

2.Hash Maps don't sort the values
3. While we are iterating through an Arraylist we can use the Iterator *.remove()* to remove the value we are currently iterating on however the *.remove()* methods within Arraylist can be used to remove a value at a given index or with a specific value.
4. A Hash Set creates a HashMap internally to check for duplicity of a value.
